ACM PANDAYAN BOOKSHOP E-WEBSITE

MOCK-UP DESIGN PROJECT

CS 3215 - Human Computer Interaction

Submitted by:

AQUINO, SEAN XANDER B.

COLICO, CARL RENZ M.

MONTENEGRO, JOHN RENZZO C.

BSCS-3A (Group #9)

OVERVIEW

1. Importance of the Chosen Application/System

The proposed system aims to serve a critical bridge between trusted physical presence and the digital shopping expectation of modern consumers. As one of the leading education supply retailers. Pandayan has now built a strong reputation through the community and with its quality products. However, their current online presence fails to reflect that matter of excellence, creating a disconnected connection between online shoppers that limit their reach and revenue potential.

This redesigned system aims to transform Pandayan's website from a mere digital like brochure into a fully functional e-commerce platform that authentically represents the brand's commitment to its potential services online. By implementing a centralized online store with integrated inventory management, connectivity, and seamless checkout processes, users will experience the same level of service of what's in physical and convenience online that they have come to expect from Pandayan's physical stores. The redesign addresses the growing demand for online shopping while maintaining Pandayan's cultural identity and values as a Filipino-owned educational supply partner.

2. Problems Intended to Solve

This application/system addresses the following issues:

- Problem 1: Disconnection from Core E-Commerce Functionality
- Problem 2: Poor User Interface and User Experience
- Problem 3: Ineffective Product Discovery and Search
- Problem 4: Broken Features and Poor Maintenance
- Problem 5: Missing Local Inventory Integration
- Problem 6: Utilizing Kaibigan Card Benefits through Online Platform

3. Target Users and Application Usage

Target Users:

Primary Users

1. **Student** - Pandayan is known to students that are budget conscious who need quick access to school supplies, art materials and study essentials. They primarily shop online for more options, value, affordability, and the ability to compare prices easily by just scrolling through their devices.
2. **Teachers/Educators** - Professional users who require bulk ordering capabilities for classroom and supplies, appreciate quality products, and need reliable recurring purchase options. They often shop things specifically on grade-level (like yellow pad for highschool students) and features like institutional discounts.

Secondary Users

3. **Small Business Owners/ School Administrators** - Institutional buyers who need bulk ordering capabilities, quotation requests for them to sell with big buy back on their part, and ability to utilize loyal program benefits for significant cost saving.
4. **Kaibigan Card Members -** Existing loyalty program participants across all user segments who expect their membership to provide meaningful benefits and seamless integration with online shopping experiences.

Usage:

- Users will access the e-commerce web application to **browse product based on categories tailored for the supplie**s they are searching for, they can **also search for specific items using intelligent search bar** with *autocomplete*, **account and order management** users now can create and manage their accounts to save delivery addresses and track their order status , **add products directly to their shopping cart**, flexible fulfillment options users now **can select between home delivery or Pick up in Store at the nearest Pandayan Branch** based on the input location on their profile settings, **complete**

secure payments, **track orders in real time, view order history with a reorder purpose.** Addition to this is the **initial plan** of **Pandayan members to use their Kaibigan card** to avail discounts and apply points during their purchase orders.

- The system will ensure a seamless experience by offering persistent **cart visibility** which is one of the **icon that is missing in the website** showing **item count with notification** and total on every page, **browse stock availability** of the selected products, **transparent upfront pricing** this includes if the order is being ship directly to their selected address, we are also **initially plan** to build its **mobile - optimized responsive design**, **email or sms order notification,** and a **error free navigation** of the website with all features functioning properly.

4. User Experience and Expected Feelings

The redesigned system is designed to provide:

- **Ease of Use:** With simple navigation comes with an intuitive user friendly interface that eliminates confusion. With this it will make users feel comfortable and confident navigating through the website whether they're first time visitors or returning users.
- **Efficiency and Speed:** Having a quick access to essential features with products discoverable will create senses of control and progress, users will experience complete satisfaction of accomplishing their shopping without the feeling of frustration of searching through the website.
- **Reliability:** A stable platform the minimizes errors and downtime, ensuring consistent performance across all features.
- **Satisfaction:** A visually appealing and interactive experience that reflects Pandayan's quality and standard. With clean, modern design and smooth animations with responsive interactions create a delight shopping experience.
- **Trust and Confidence:** Users will feel assured that they're shopping on a legitimate, secure platform that represents pandayan reputation.
- **Empowerment and Control:** The redesigned interface will empower users to make informed decisions by the availability of information such as clear product specifications, availability information, pricing as well as delivery options or other shops where it can be bought also through online in a clear, organized manner.

5. Advantages and Disadvantages Compared to Existing Systems

Advantages:

- **Brand Control and Customer Relationship Ownership -** Previously as seen in their website the system accommodate users where they are redirected to Lazada or Shopee to buy the product, the redesigned platform keeps customers within Pandayan's ecosystem from discovery through purchase completion.

- **Educational Focus and Expertise -** Unlike other general marketplaces where school supplies compete with millions of other products. Pandayan's redesigned platform maintains laser focus on educational and office supplies.

- **Improved Responsiveness and Speed -** Mobile - friendly navigation, optimized image loading, simplified navigation such as order forms and progressive web app capabilities create a faster, smoother experience.

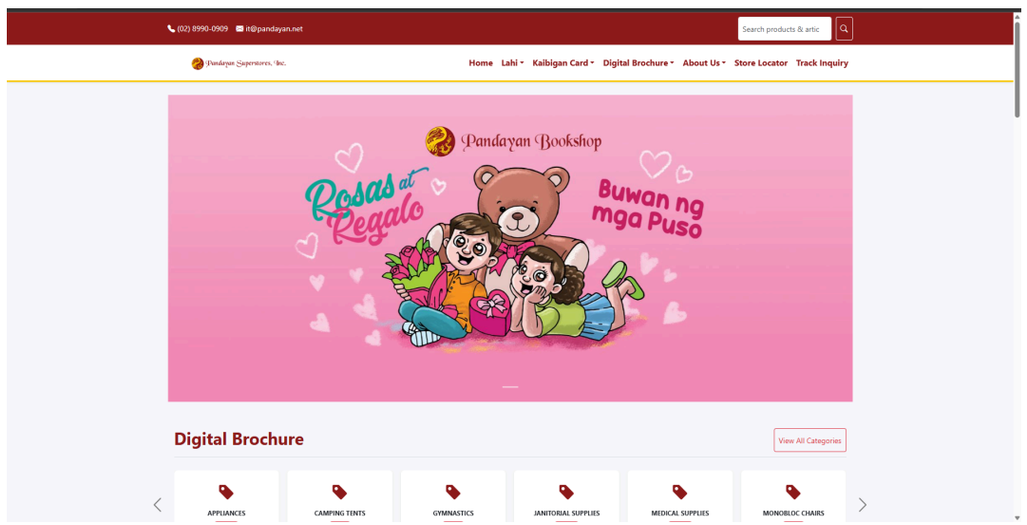

- **Centric User Experience: -** This includes support for popular local payment methods (GCash, Maya, cash on delivery), mobile-first design recognizing high mobile usage in the Philippines, language options that honor Filipino identity, and product categorization aligned with the Philippine educational system.

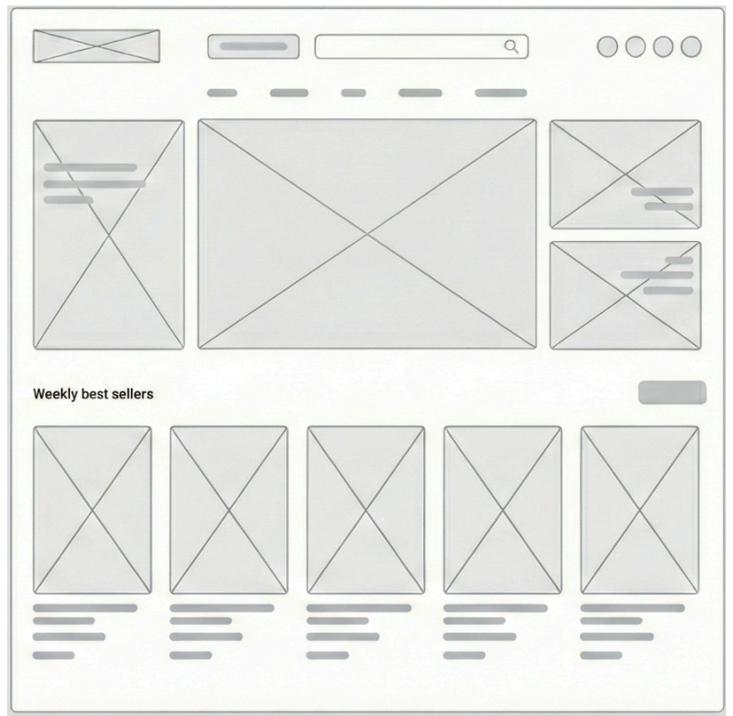

Disadvantages:

- **Learning Curve:** While the new system ultimately provides better functionality, the transition period may temporarily confuse some users who must learn new nav. process, acc. creation process and other flows such as order and checking out.
- **Technical Infrastructure Requirements:** The redesigned system demands robust backend infrastructure that the current website lacks. This include real - time inventory management systems, secure payment gateway, customer database management.

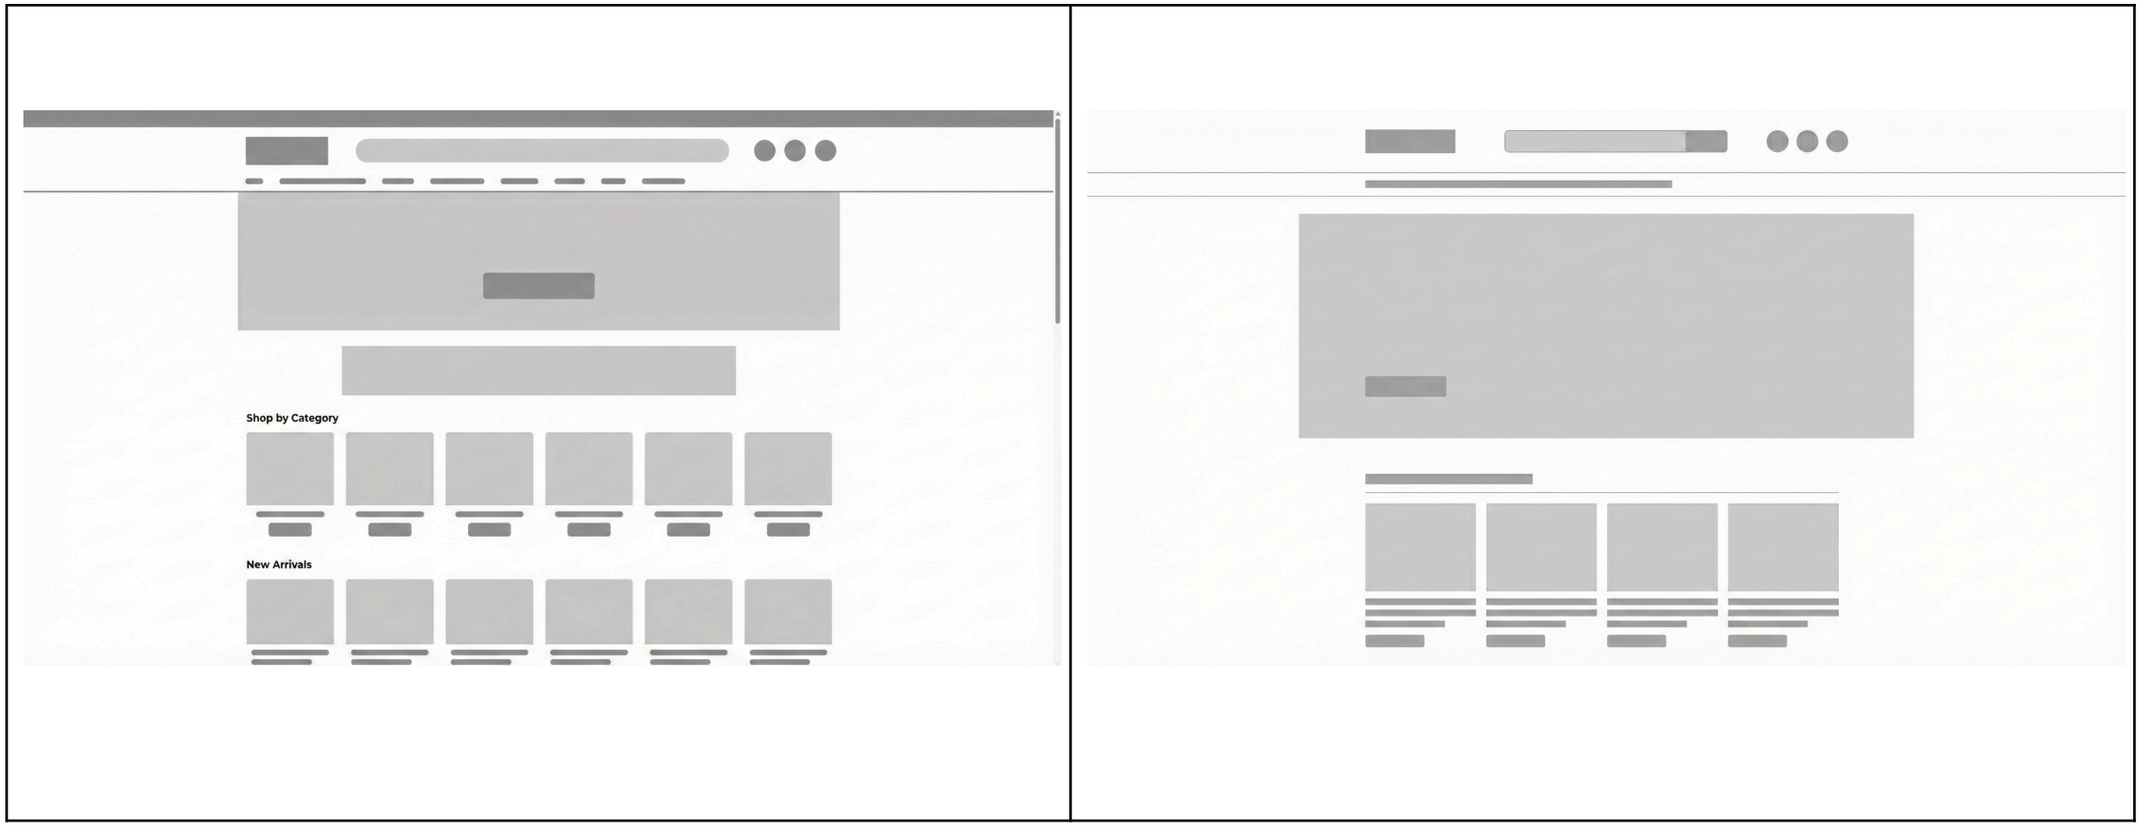

- **Competition with Established E-Commerce Giants:** This project of redesigning the platform now competes directly with Lazada and Shopee flawless systems with massive ingrained user habits. Convincing new users to try new platform requires overcoming significant behavioral inertia and barriers that weren't issues when simply existing as a marketplace earlier.

- **Dependency on Continuous Maintenance and Updates:** For it to be a fully functional e- commerce platform it requires ongoing maintenance, security updates, feature improvements, and content management, security updates, feature improvements as well as content management of events or that the current simple website minimizes. The value of the system for now depends on keeping product catalogs, current functionality not updated making the first time user or visitor of the website not meets the user expectations this also applies when it operates on mobile devices as its functionality changes.

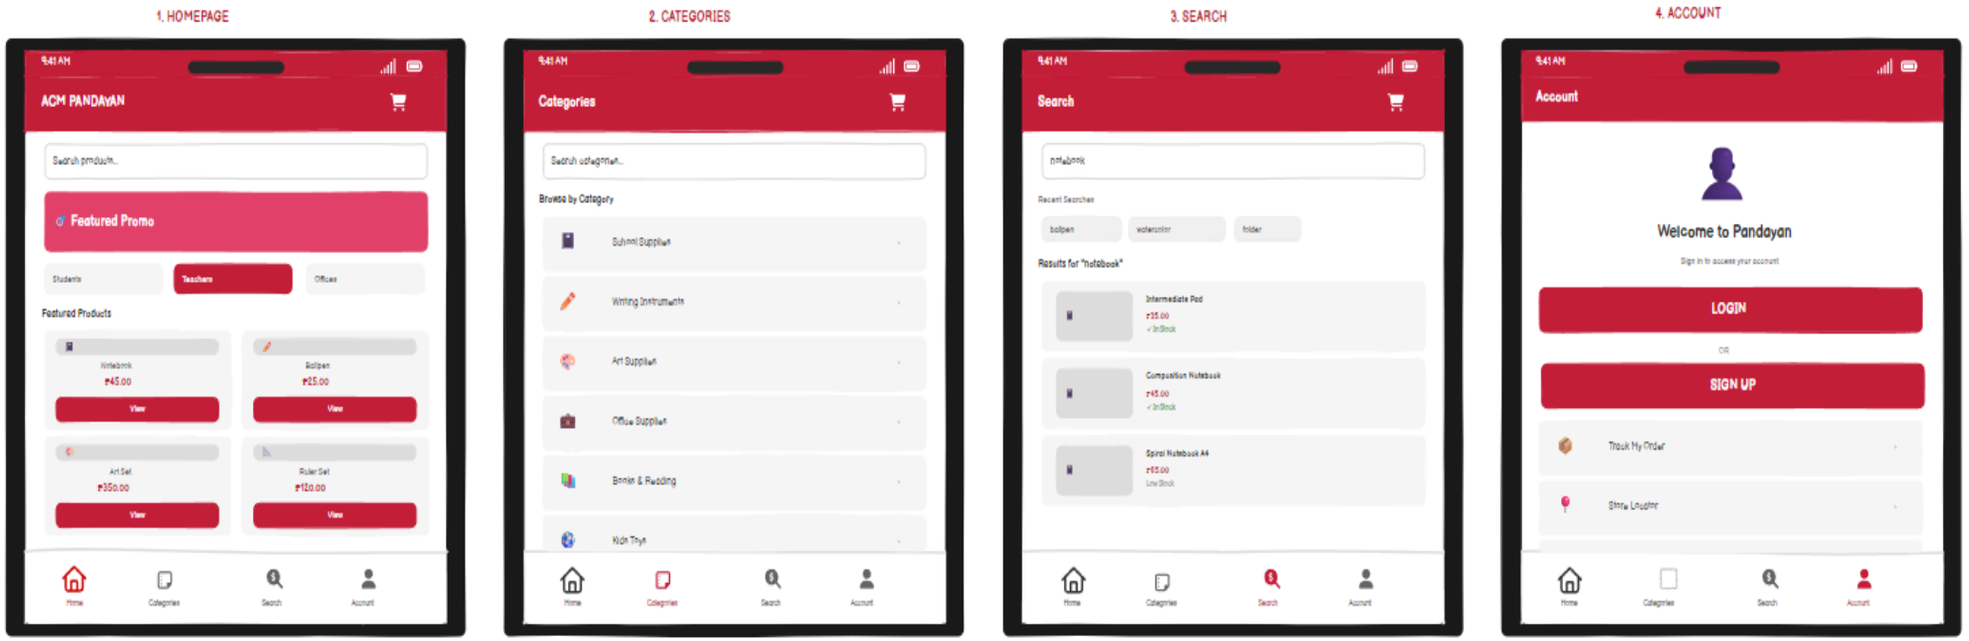

<Original Website and Mockup Design 1> The image on the left basically shows the current Pandayan Bookshop website, which relies heavily on digital posters and essentially functions more like a digital catalog than an actual online store. On the other hand, the blank wireframe on the right is our initial, much cleaner layout for the new homepage. The main goal here is to simply put essential e-commerce tools front and center, so that users can actually navigate and buy items with ease.

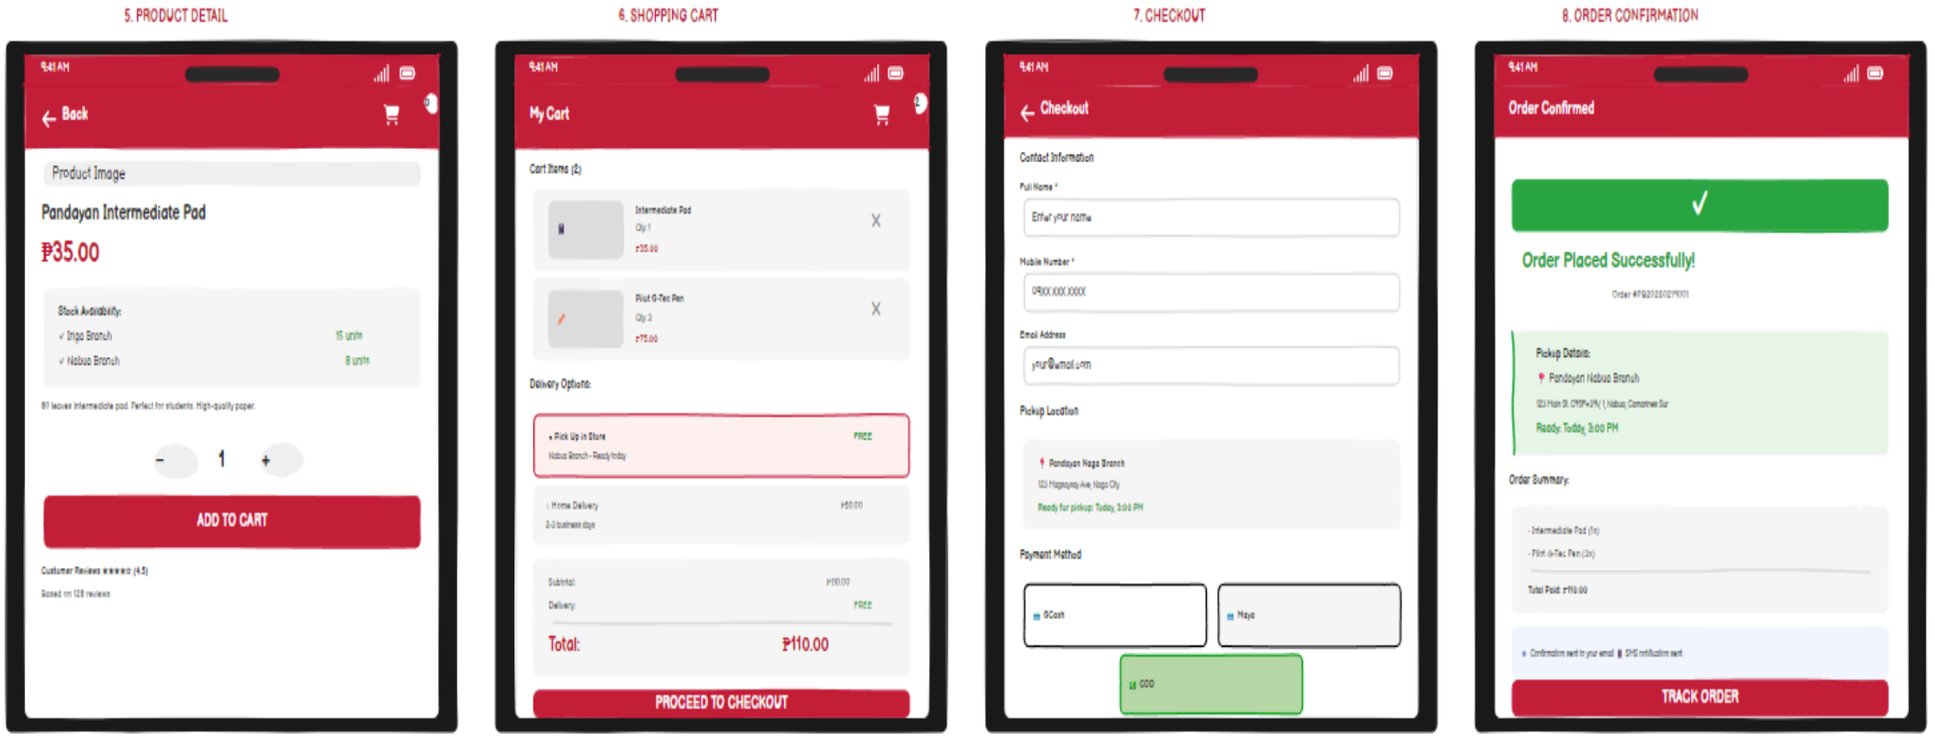

<Mockup Design 2 & 3> : These two images show different examples of UI wireframes, which basically serve as the structural blueprint for the redesign. As prototype wireframes, their main purpose is just to map out where things belong and how the site actually works before we add any final colors or graphics. Essentially, they allow us to focus on making sure the layout is organized, the features are easy to find, and the user can smoothly navigate the store without getting distracted by the visual design.

MAIN NAVIGATION STRUCTURE

MOCK UP DESIGN 4 : Here is a mock up design interface for the Main Navigation structure of the e-commerce website AMC Pandayan.

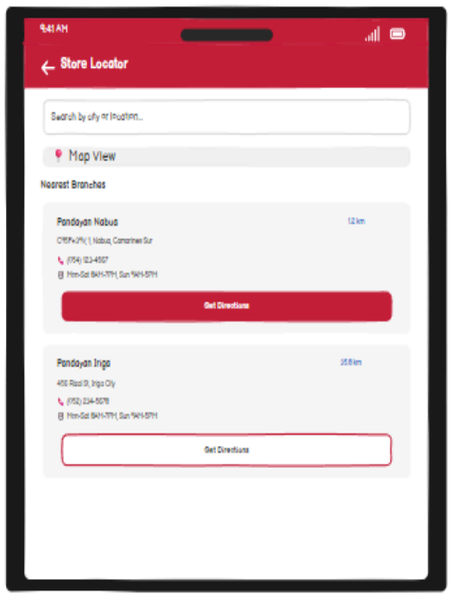

PRODUCT & SHOPPING Details

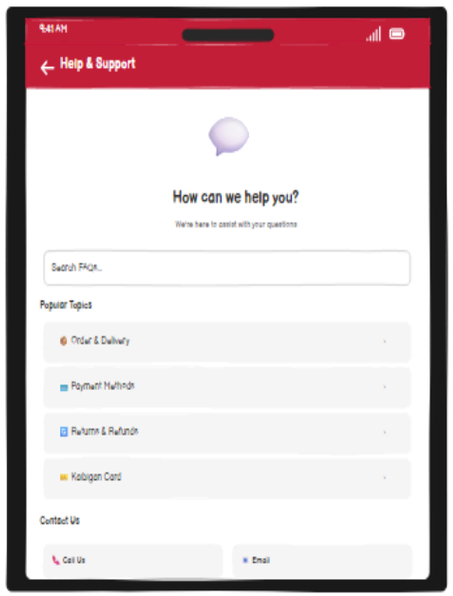

MOCK UP DESIGN 5: Here is a mock up design interface for the Product and Shopping structure of the e-commerce website AMC Pandayan.

ADDITIONAL FEATURES

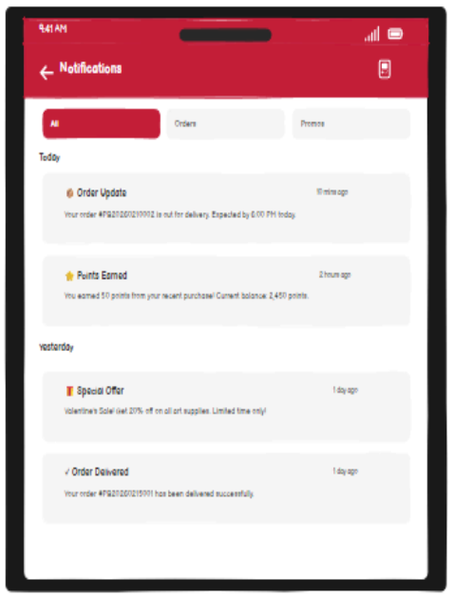

13. STORE LOCATOR

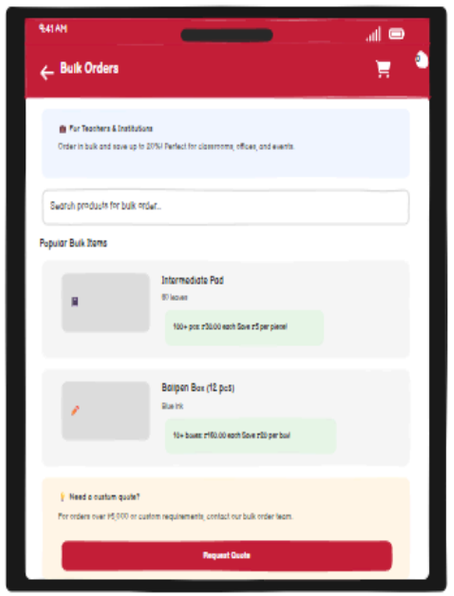

14. HELP & SUPPORT

15. NOTIFICATIONS

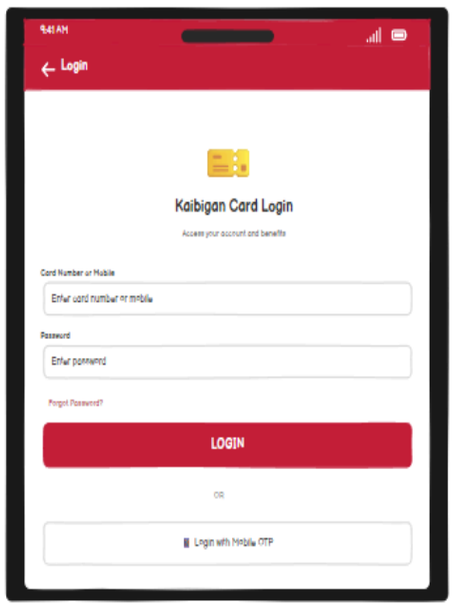

16. BULK ORDER CENTER

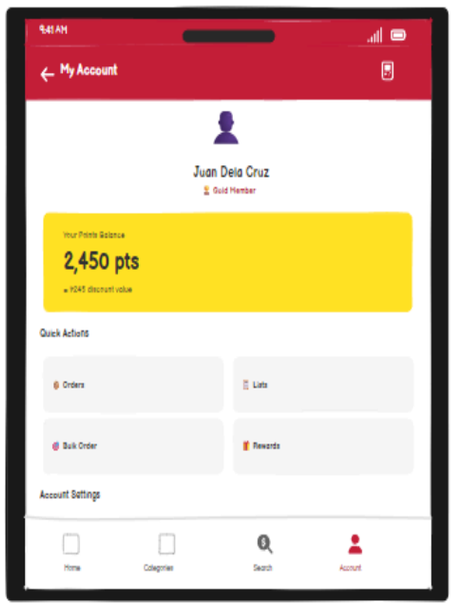

MOCK UP DESIGN 6 for Additional Feature : Here is a mock up design interface for the additional feature structure of the e-commerce website AMC Pandayan Store Locator, Help and Ask section, Notification and Bulk Orders page.

KAIBIGAN CARD MEMBER FEATURES (OPT TO PUT or REDESIGNED)

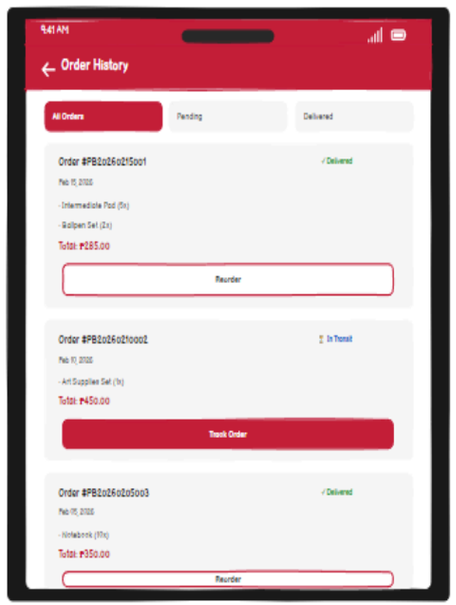

9. LOGIN

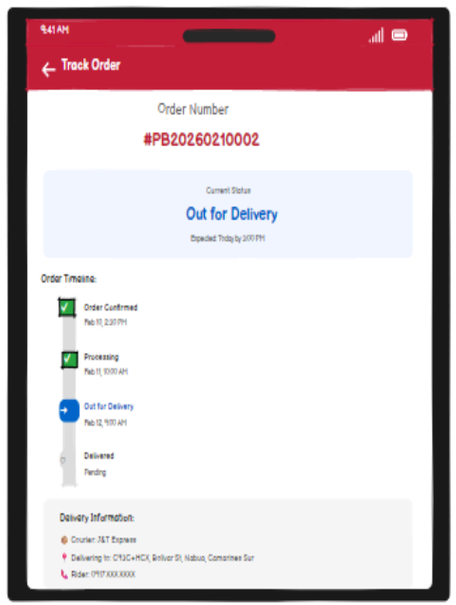

10. MEMBER DASHBOARD

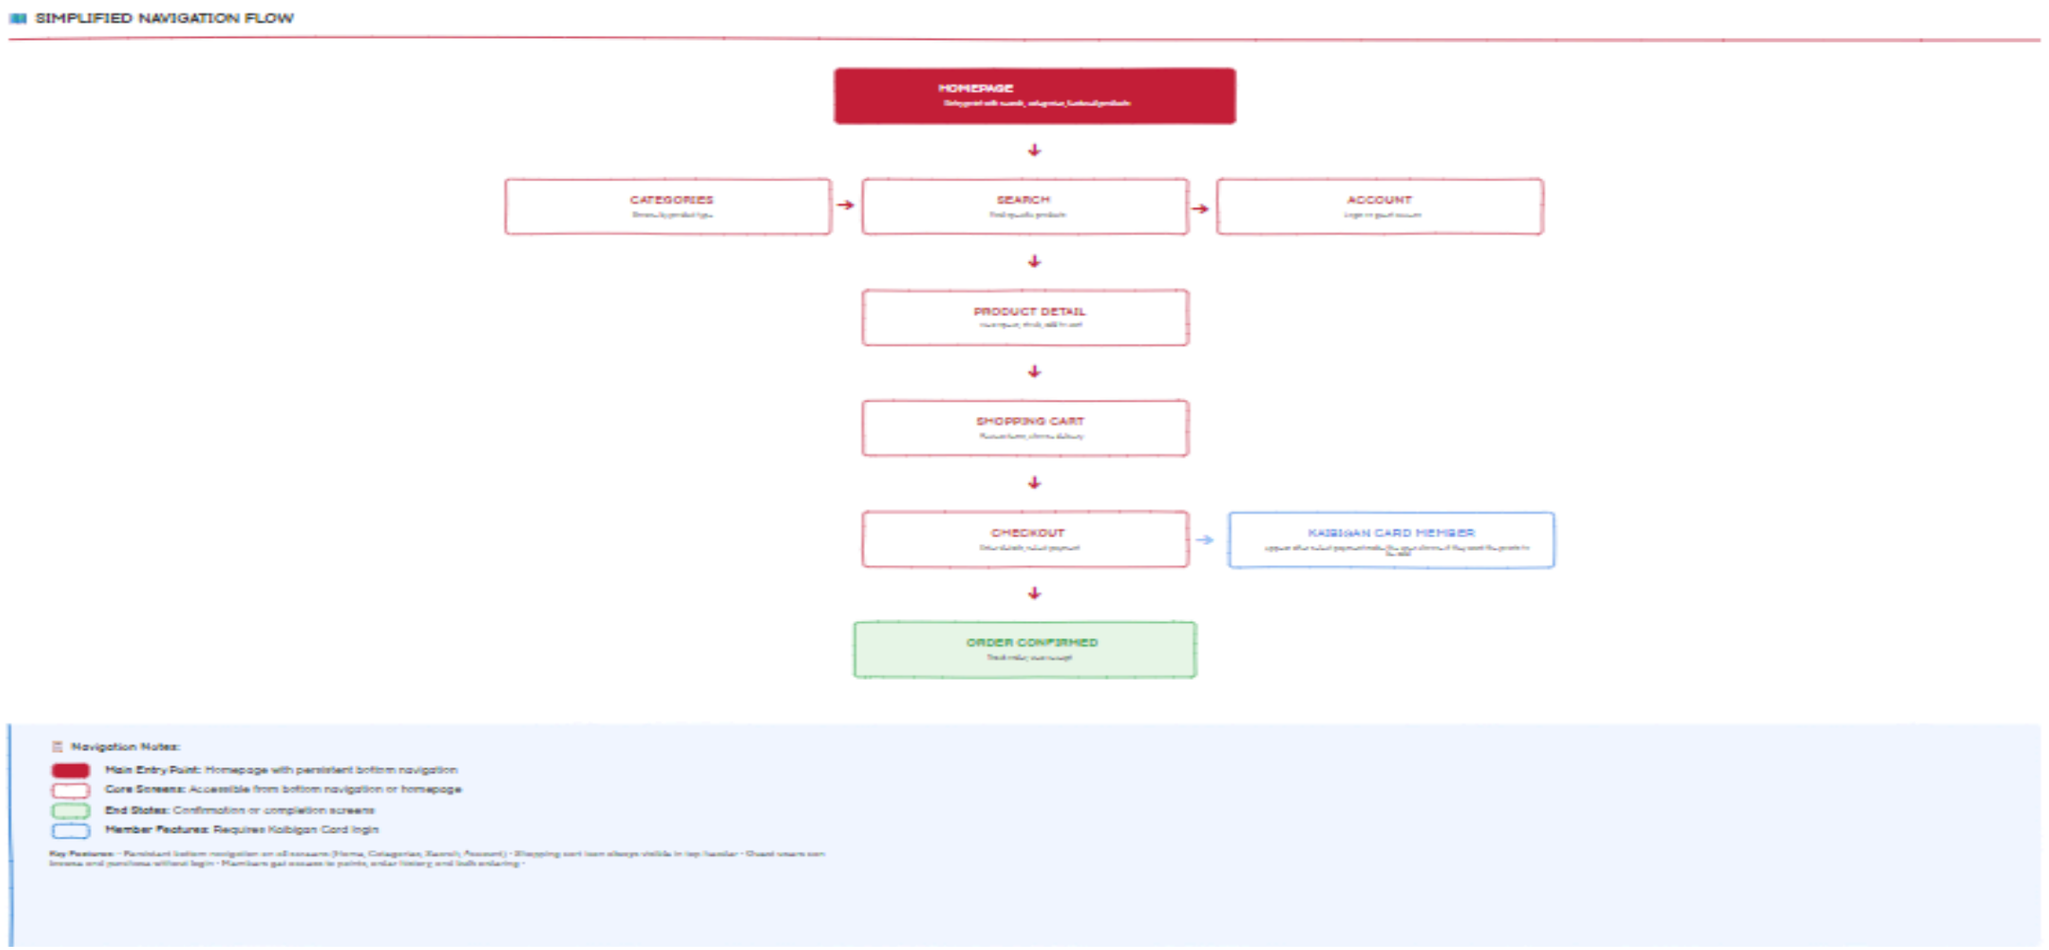

11. ORDER HISTORY

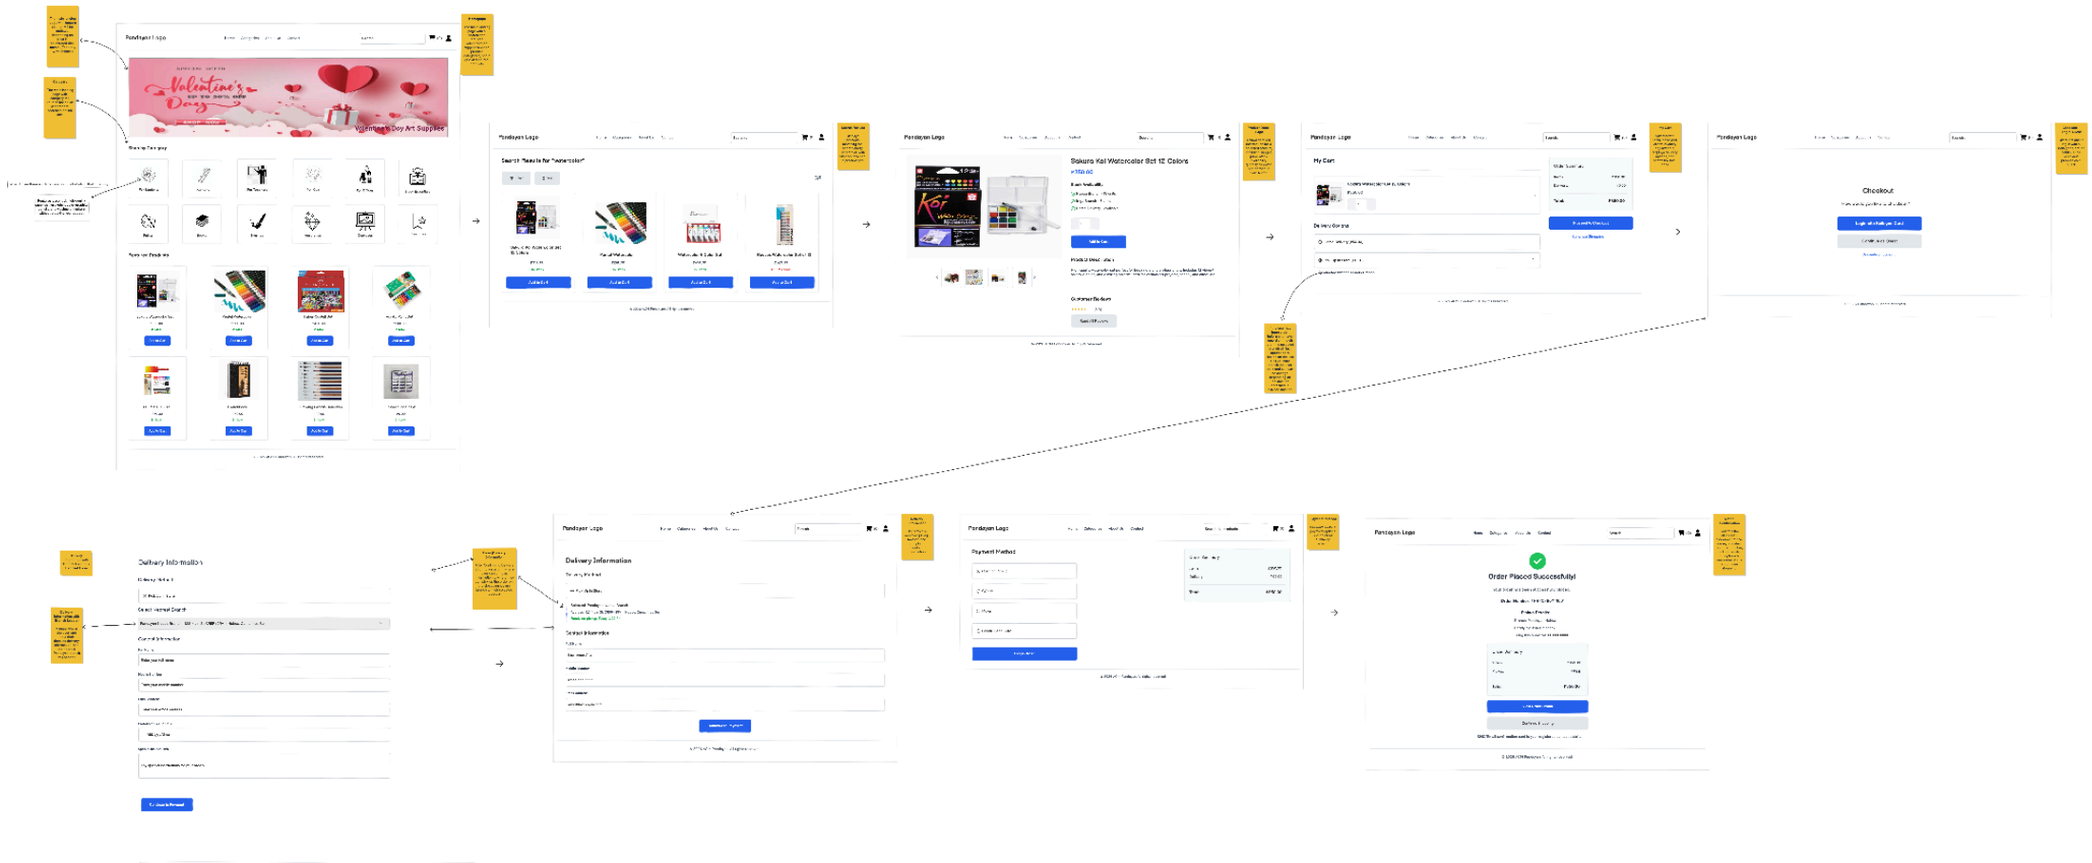

12. ORDER TRACKING

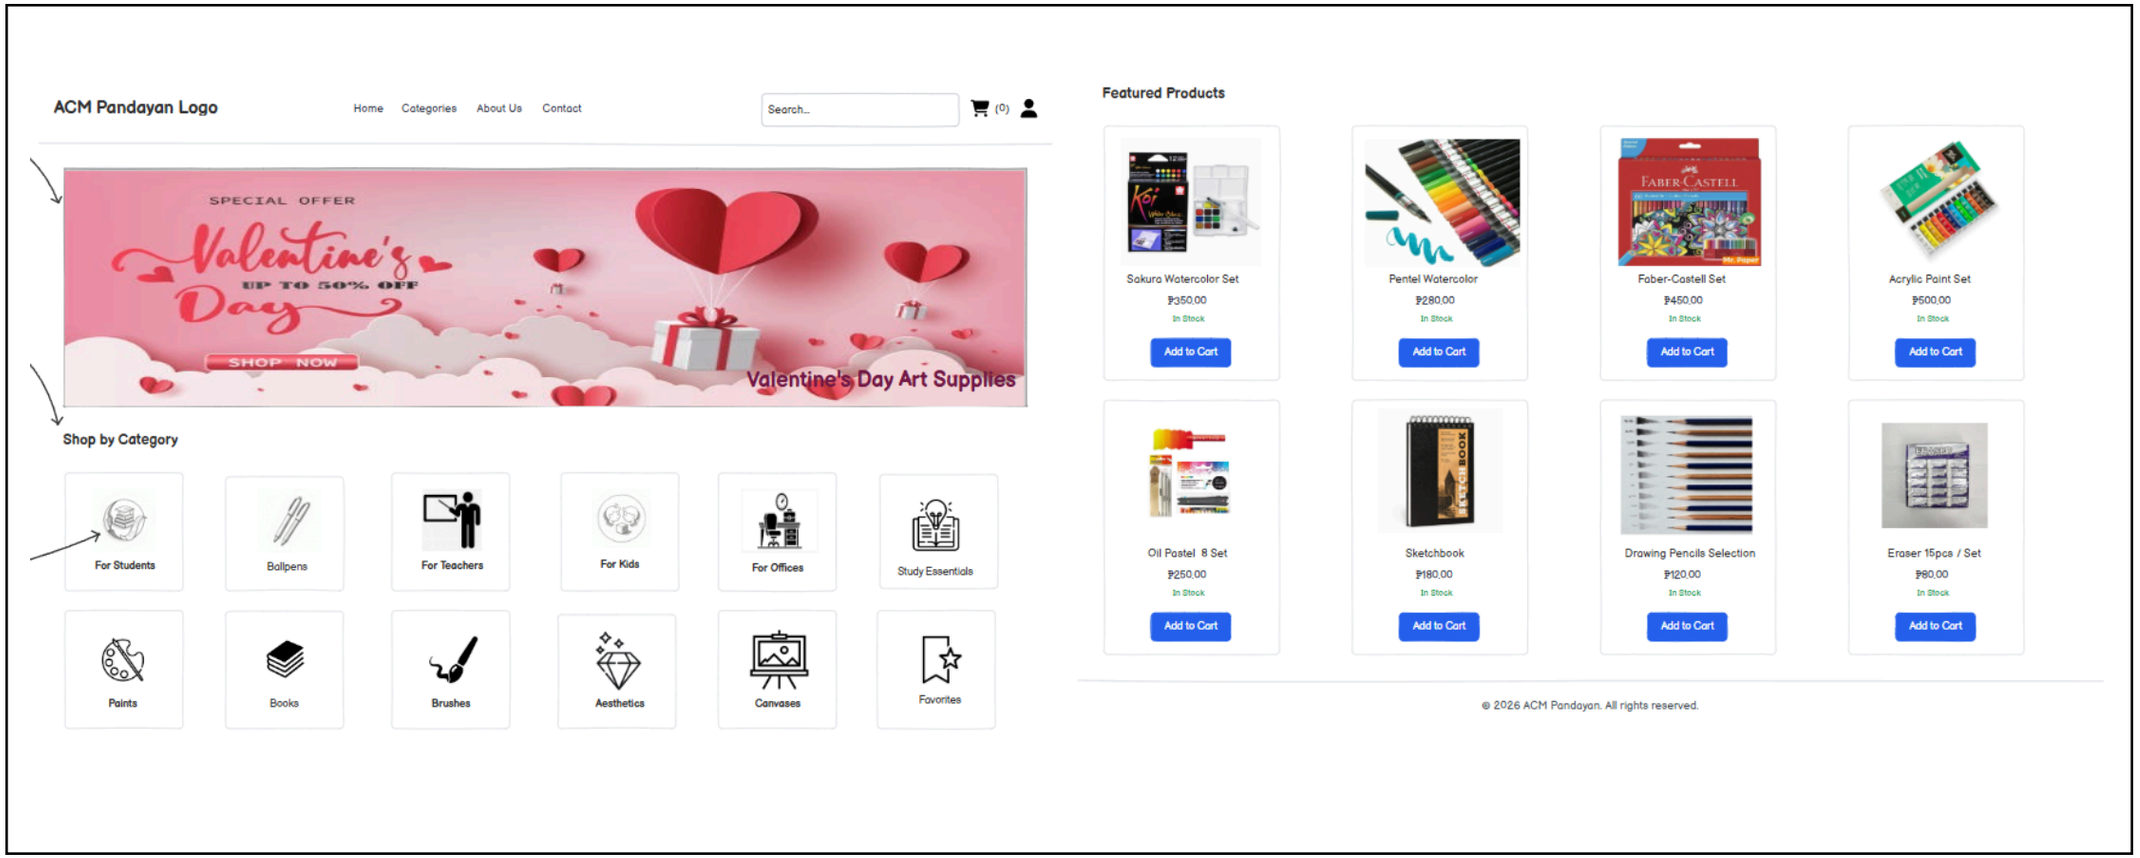

MOCK UP DESIGN 7 for Kaibigan Card Member Feature and Order Management : Here is a mock up design interface for the user order management and for the option or initial plan on additional feature structure of the e-commerce website AMC Pandayan which is the Kaibigan Card feature.

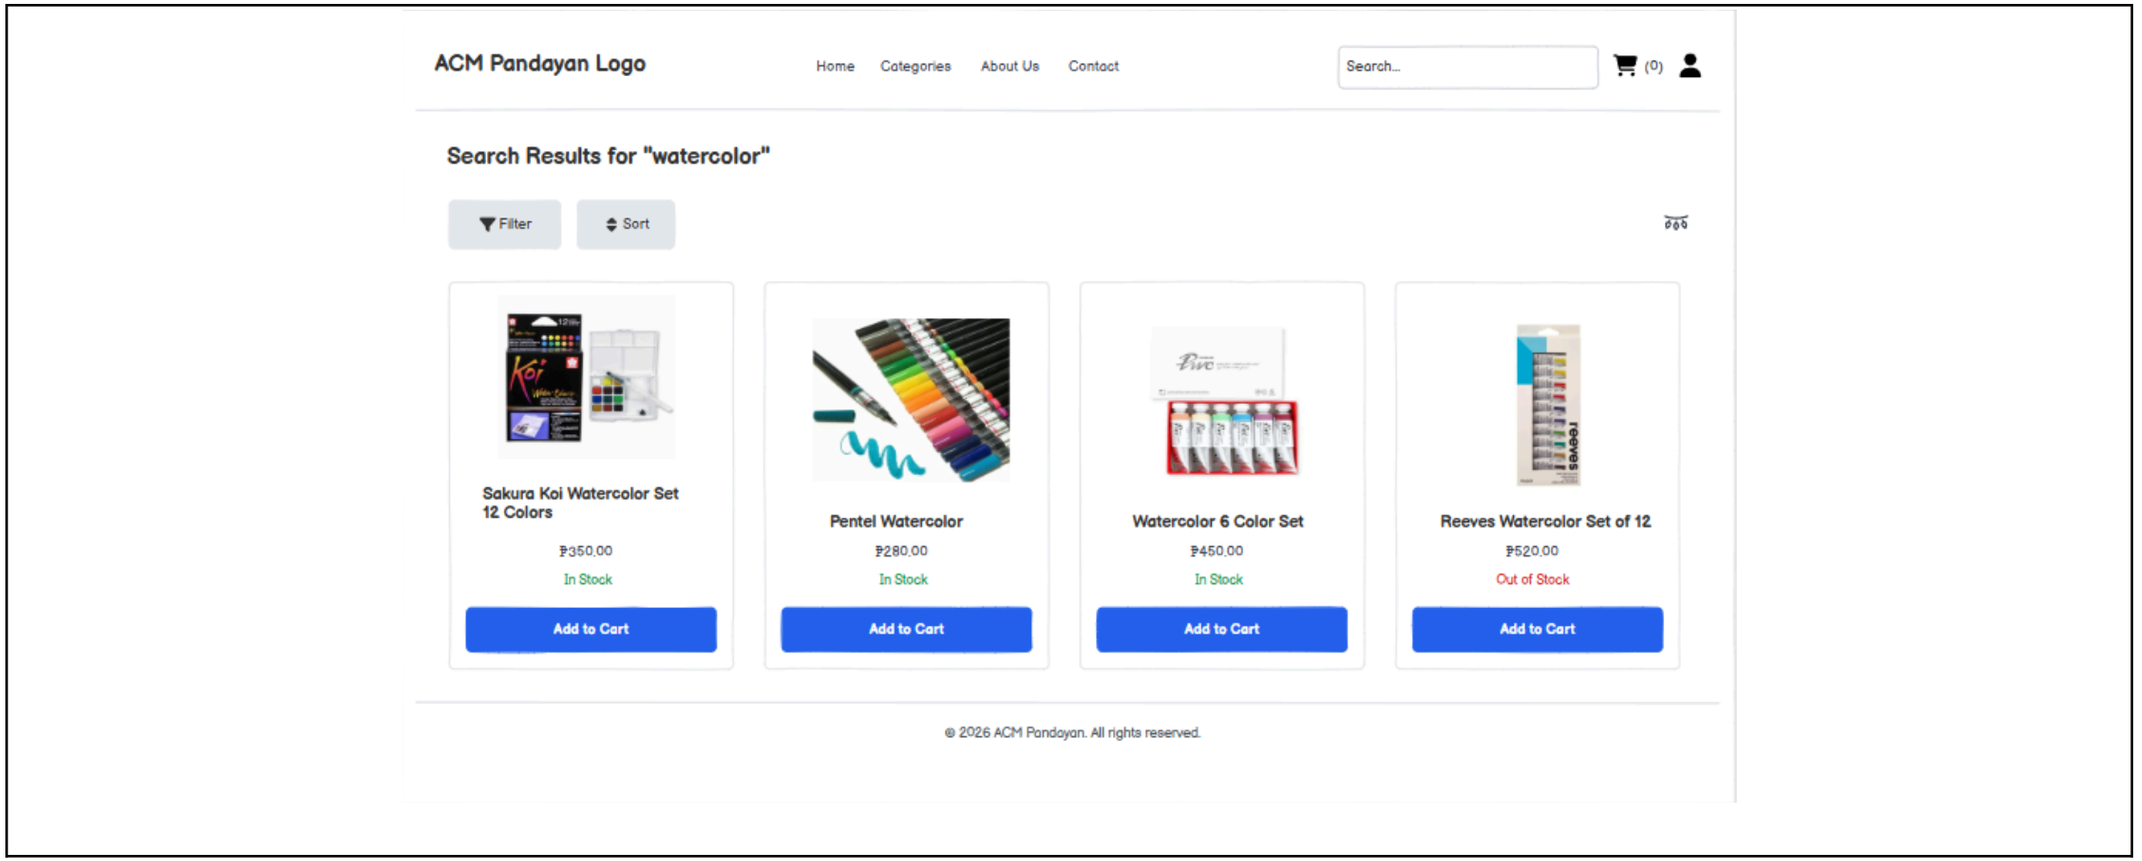

MOCK UP SIMPLIFIED NAVIGATION USER FLOW 1 : Here is a mock up Navigation Flow of what user would go through

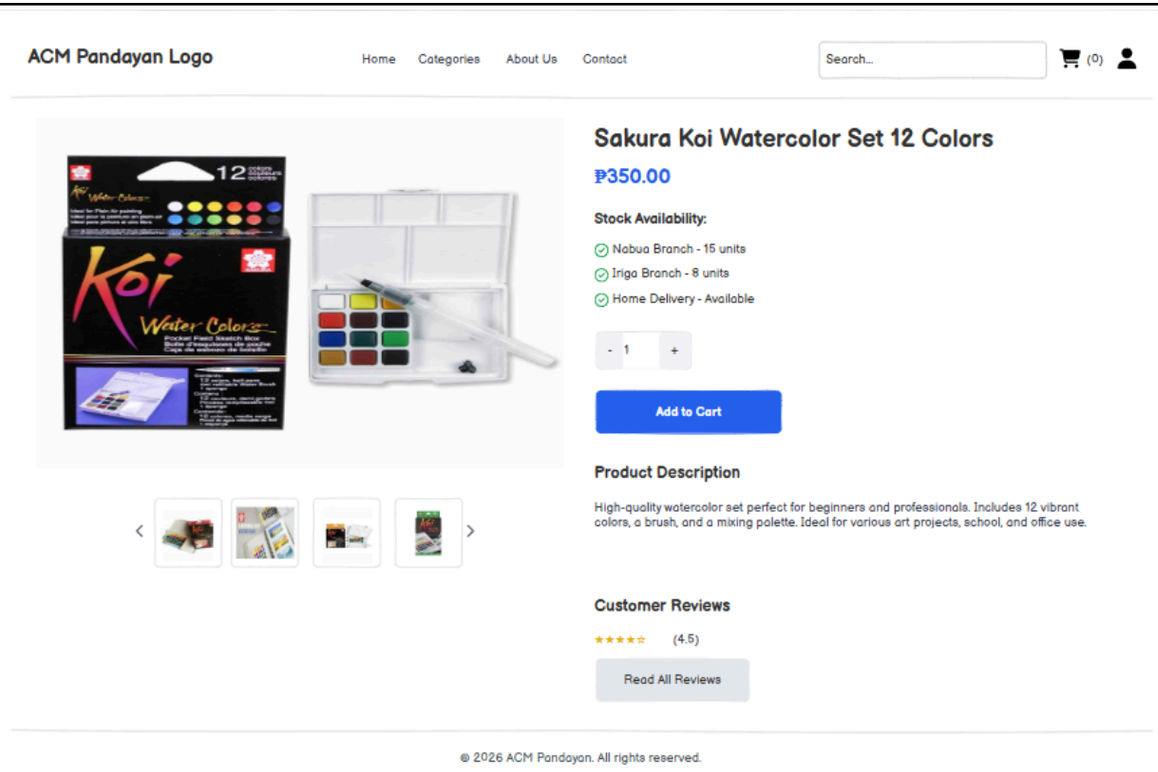

Mock up User Flow 2 UI Overview : User flow overview of the mock up interface when a user is buying an item through the AMC Pandayan Bookshop, from Homepage to Order Confirmation.

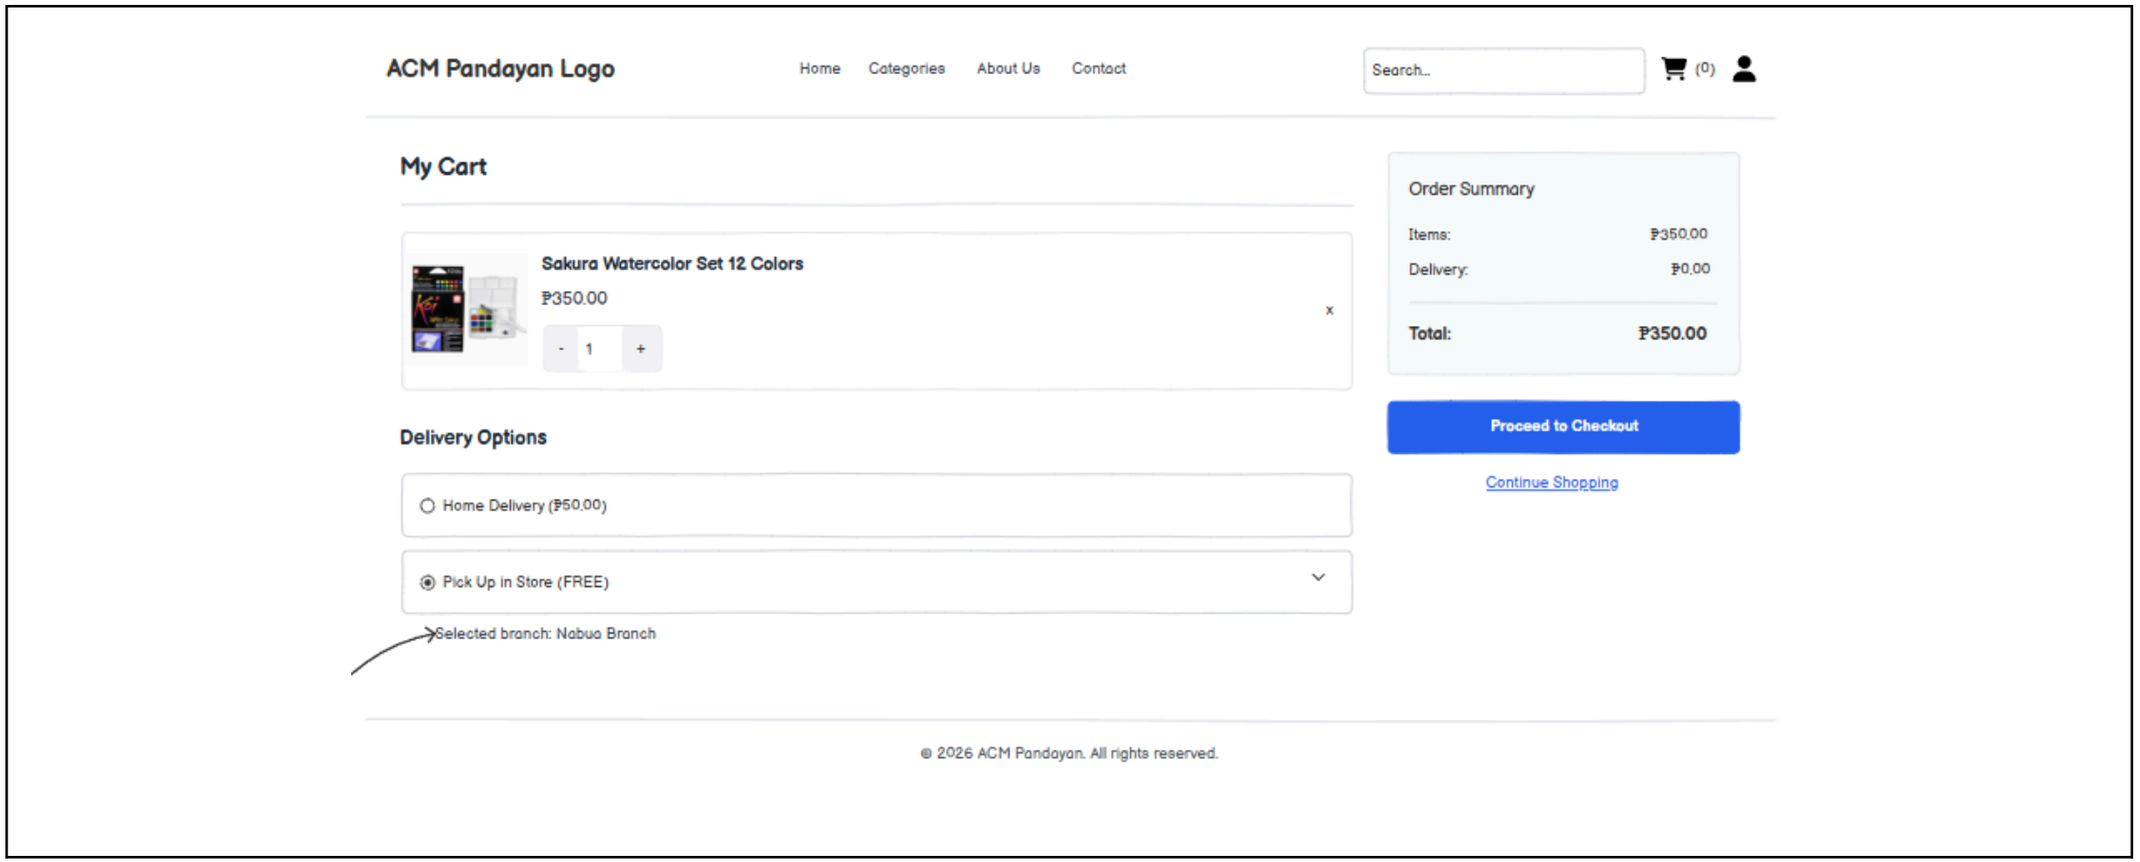

Landing Page : The user browses or searches a product by choosing a category.

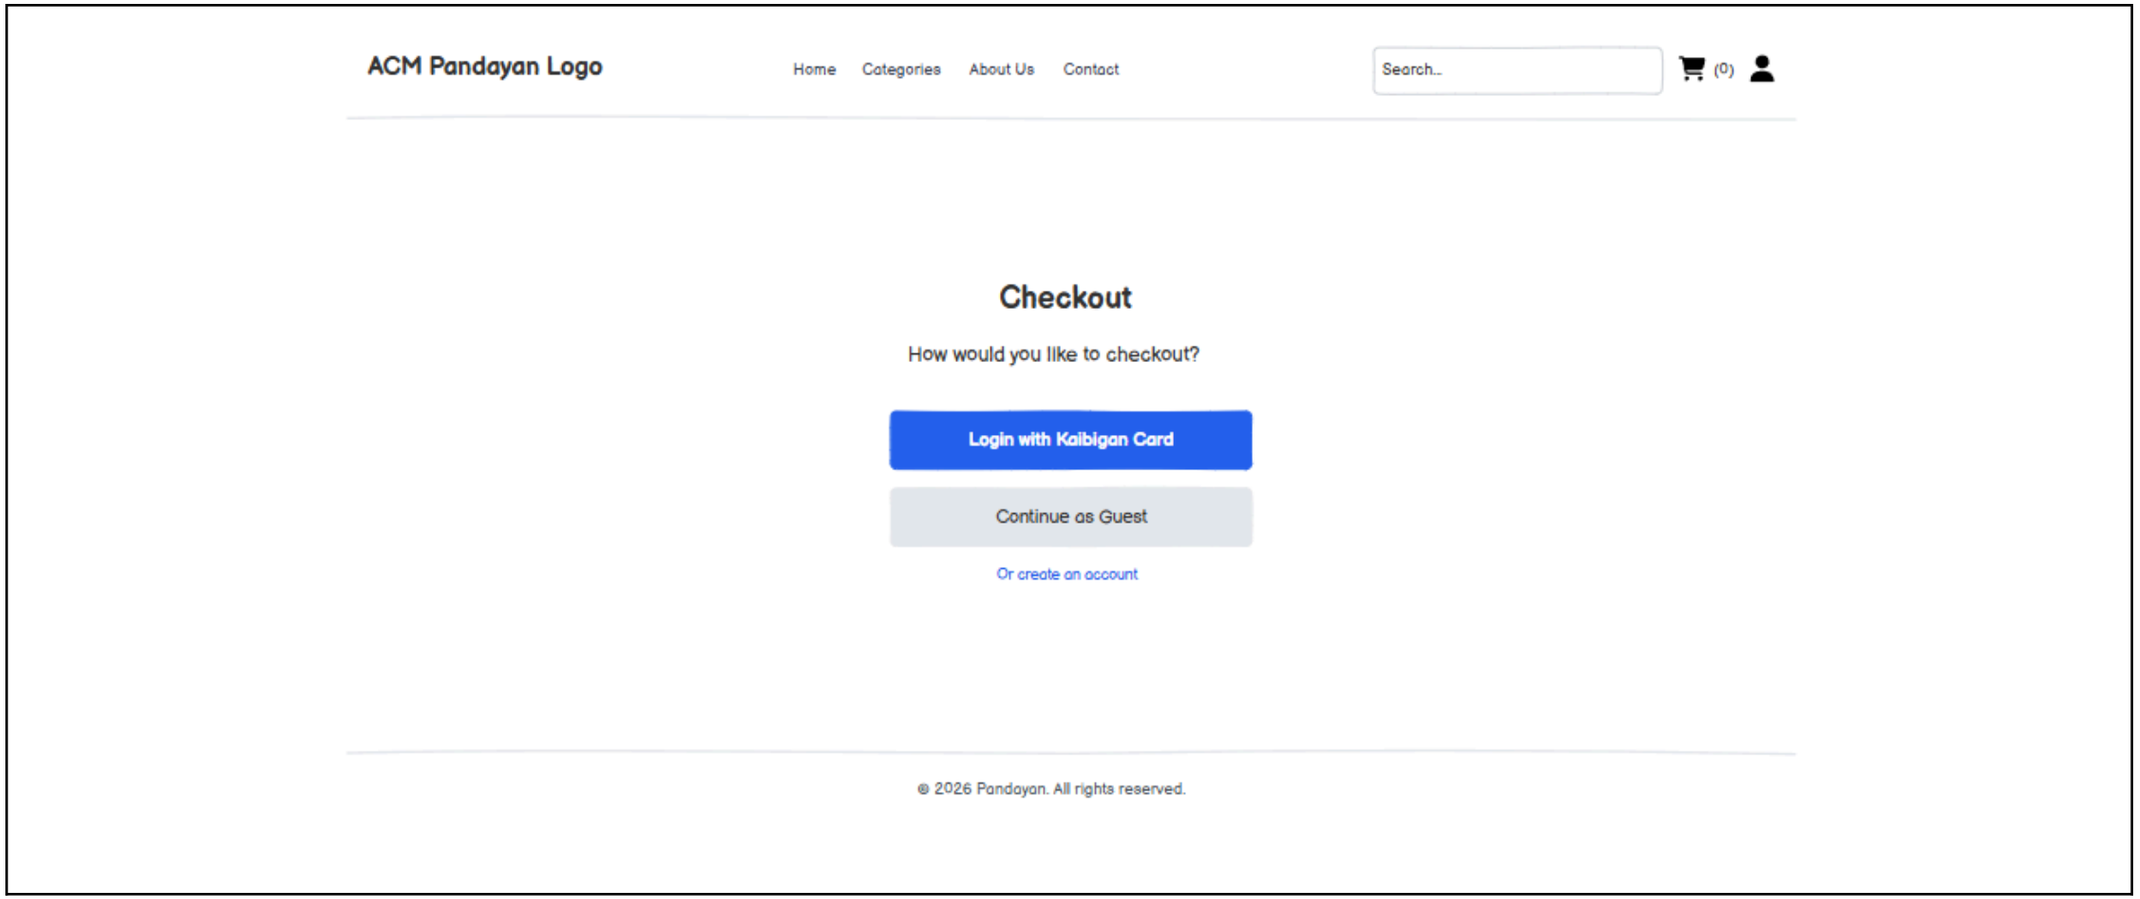

Search Results Page : The system shows the related products according to the key word typed in. The results can then be sorted and filtered by the user using the Sort and Filter options.

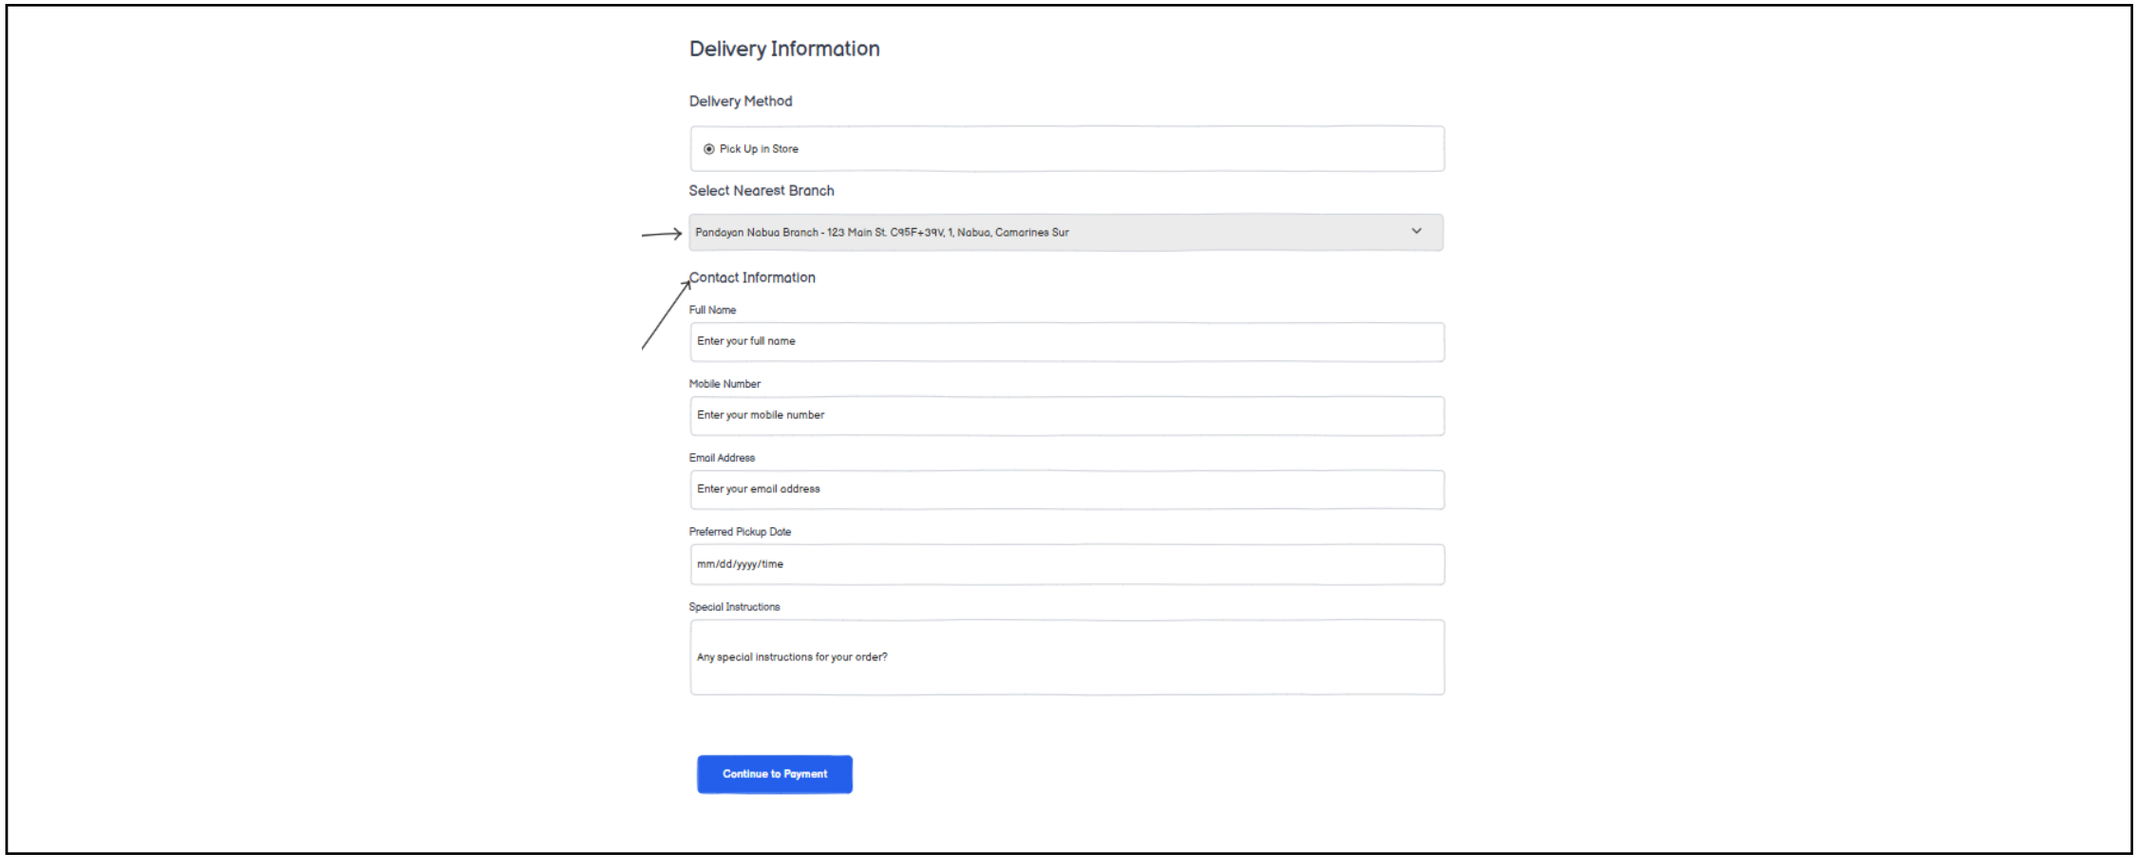

Product Details Page : The system shows detailed information about the selected product such as sample images, price, stock availability, quantity selection option, and Add to Cart button.

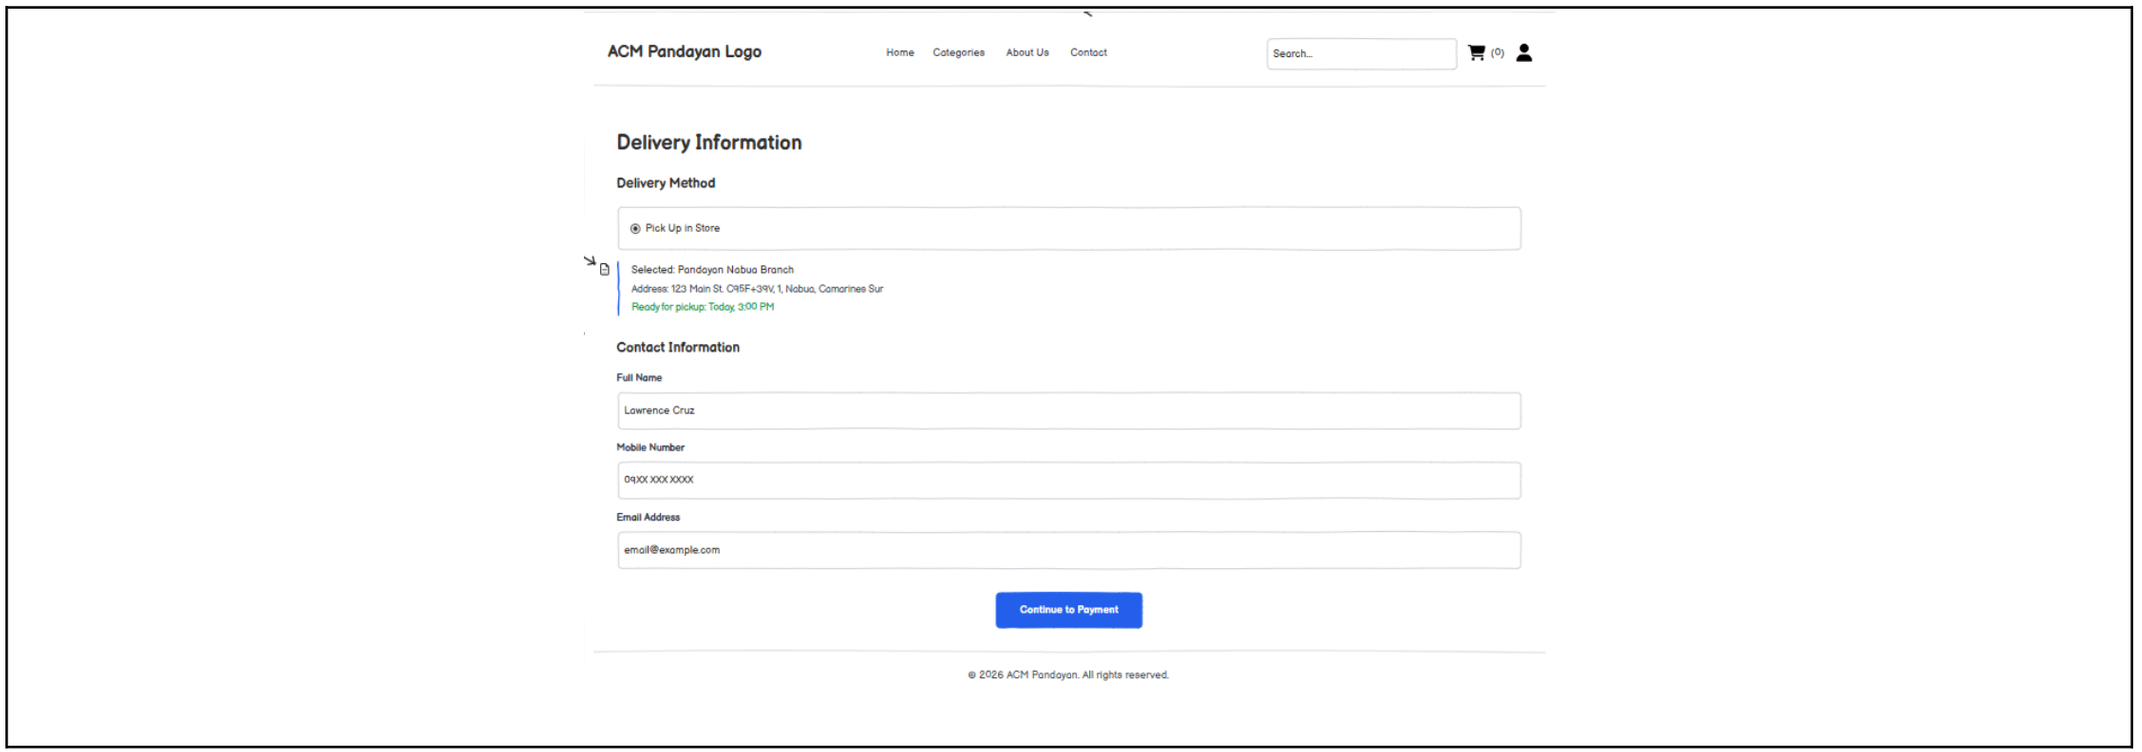

My Cart Page :The system shows an overview of the items placed in the cart, will include the ability to modify the quantity ordered, will indicate the available delivery types and will total the overall cost of the items ordered.

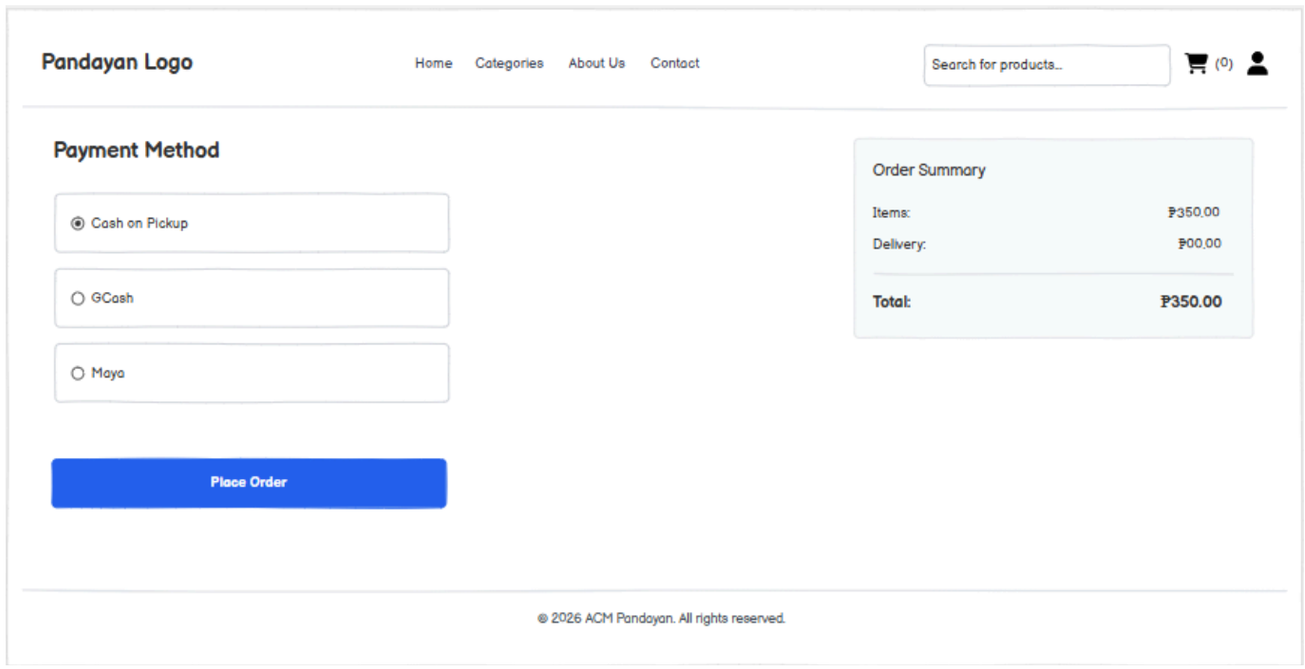

Checkout / Login Page : The system asks the user to log in with his account on Kaibigan Card or continue the check out transaction as guest.

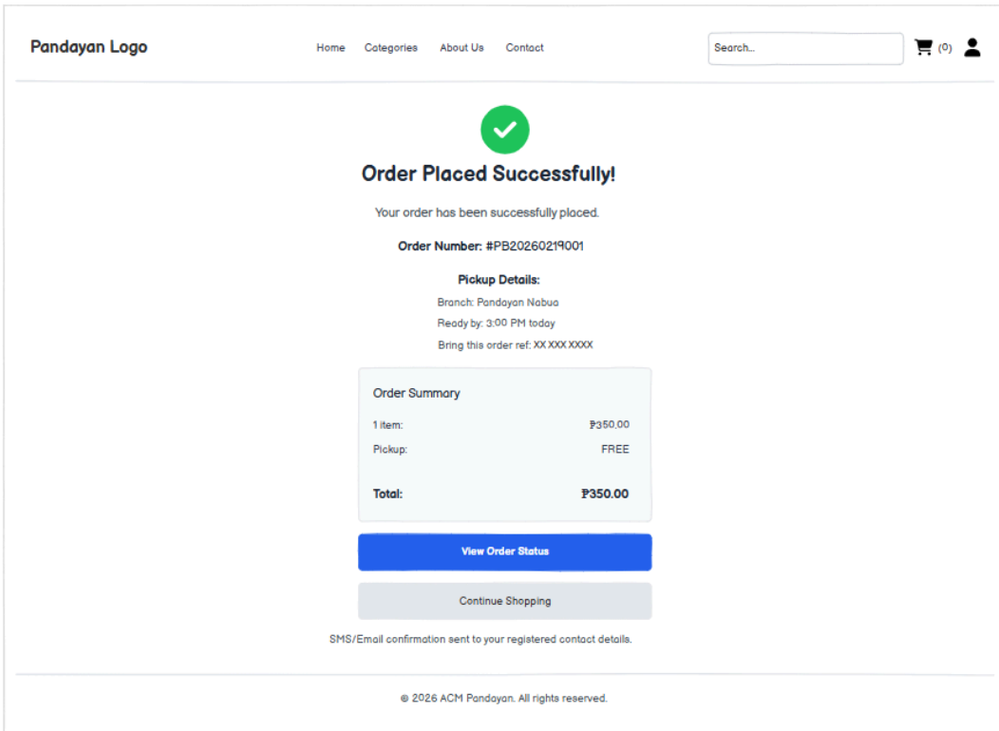

Delivery Information Page : The system allows the user to choose their delivery method. In this flow, the user selects "Pick Up in Store," chooses their nearest Pandayan branch from the dropdown menu, and fills in their contact details and pickup schedule before proceeding to the payment section

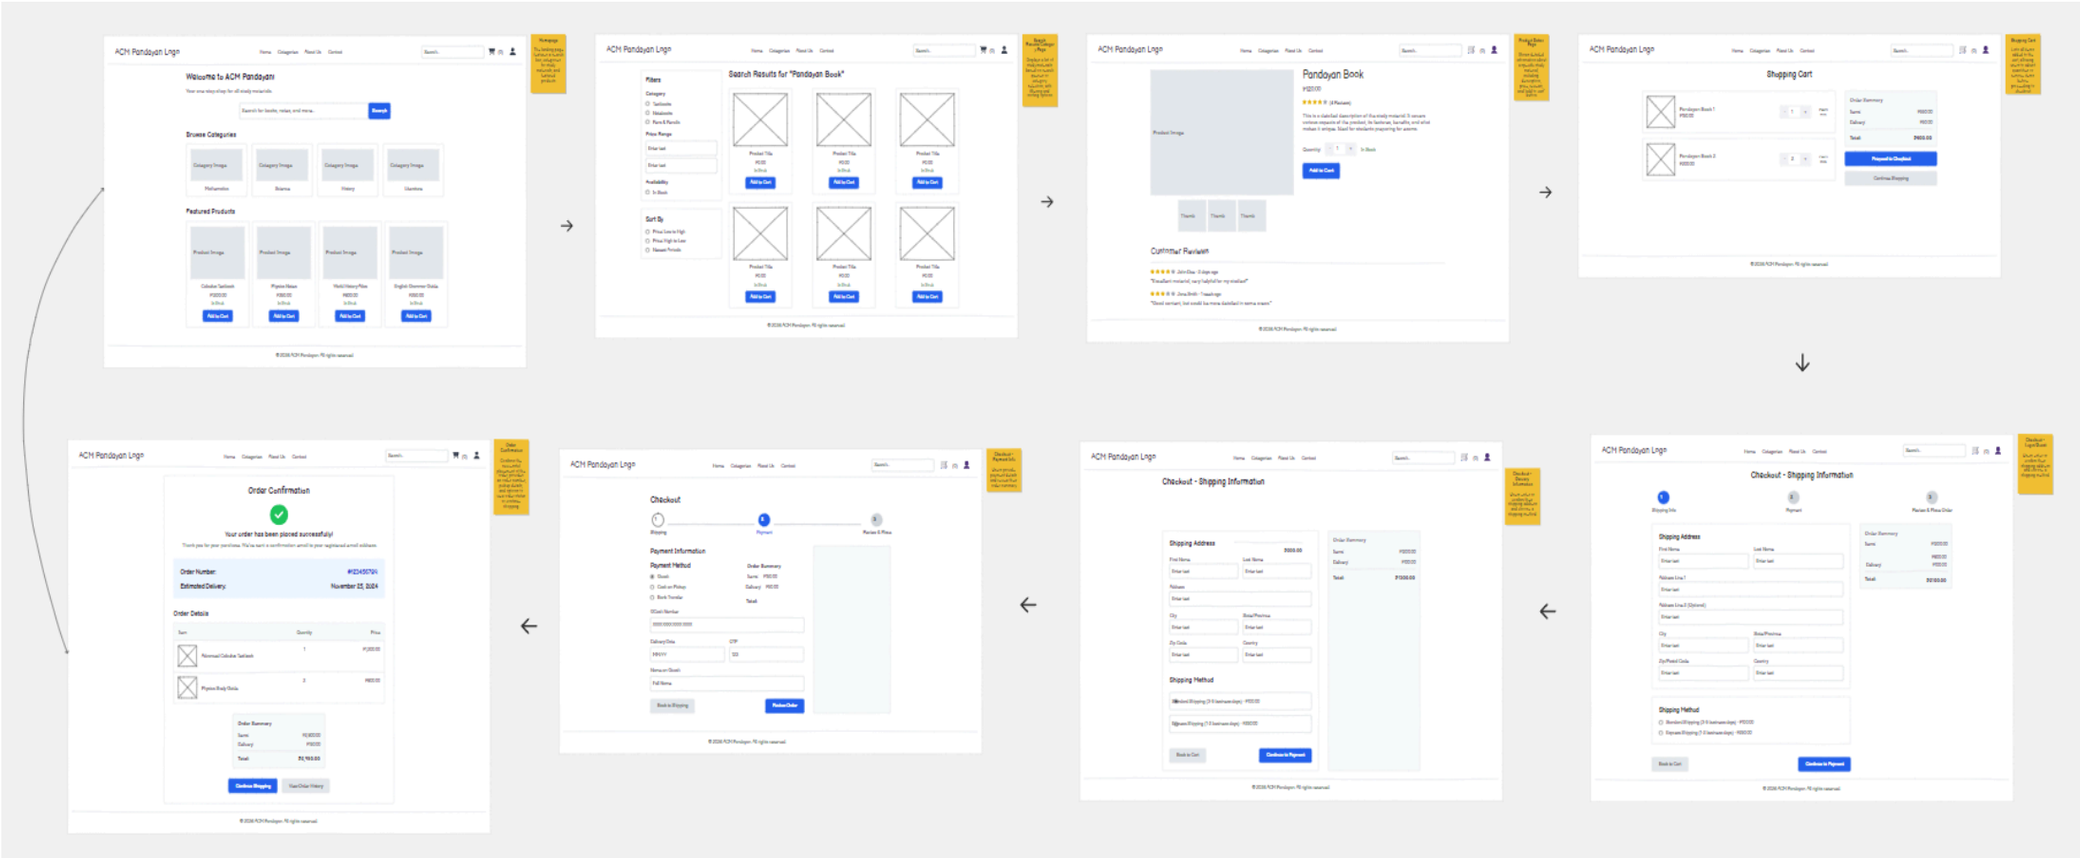

Completed Delivery Information Page : This screen shows the next step in the checkout process after a branch is selected. The system confirms the "Pick Up in Store" location and displays the exact time the order will be ready. After the user reviews this and fills in their personal contact details, they can click "Continue to Payment" to move to the final checkout step.

Payment Method Page :This screen allows the user to select their preferred way to pay. It provides convenient local payment options such as Cash on Pickup, GCash, and Maya.

Order Confirmation Page : This is the final screen that appears after a successful purchase. It confirms to the user that their order is complete and provides important details like their official order number, the total amount paid, and the exact pickup time and location.

Mock up User Flow 3 UI Overview Buying Through Gcash : User flow overview of the mock up interface when a user is buying an item through GCash , from Homepage to Order Confirmation. After an order confirmation the user will be back on the Homepage or landing page.

TAKEAWAYS

Name of Member: **AQUINO**, SEAN XANDER B.
Contribution to the Group: Mockup Wireframe, Delivery Information Page, Completed Delivery Information Page, Payment Method Page, Order Confirmation Page
Learnings: This mock-up project basically highlighted the value of user-centered design in e-commerce. I learned that an effective website prioritizes a smooth shopping process rather than just simple visual appeal. Through redesigning the Pandayan Bookshop site, I saw how practical fixes like repairing links, keeping the cart visible, and handling checkout on-site can build user trust and reduce abandoned carts. Ultimately, mapping user flows showed me that every click matters, and a clear, direct path to purchase is essential for a successful online store.

Name of Member: **COLICO**, CARL RENZ M.
Contribution to the Group: Overview, Userflow, Mock Up design page
Learnings: In this Learning Task I learned how to use websites or apps for designing applications. It also make me realized the importance of user opinion searching for opinion of website especially on how a e-commerce website content would and should have and take out unnecessary or overflowing buttons and icons. Also I learned the seamless flow and imagine the flow of the website that we are to be redesigned in the future.

Name of Member: **MONTENEGRO**, JOHN RENZZO C.
Contribution to the Group: Landing Page, Search Result Page, Product Details Page, My Cart Page, Checkout / Login Page.
Learnings: I learned about the importance of viewing how a system works from the perspective of a user. The experience in the process shows them the points of pain, usability, and what needs to be improved. One of the things that should be given priority when creating a system is User Experience since direct influence is created on the user satisfaction, efficiency, as well as overall engagement. Designing a system is not just a useful process but a user-friendly and simple way to navigate space.
